

WHY CAPTURE

1 SELF-ALIGNING TILES

The design of most frame-and-tile systems allows tiles to easily shift out of alignment. Capture Tiles are made to be self-aligning. Their combination of secure clips and locking magnets ensures that the edges of the Tile grid remain crisp, straight and even.

2 FRAMED FABRIC TILES

Most competitors' fabric tiles are made of textile glued to unframed fiberglass — flimsy and unstable. They are attached to the panel frame in a separate operation during product installation. Capture fabric tiles are built already backed with a solid frame for greater strength and much faster setup time for every panel. You'll easily recognize Capture's superior construction and ease of installation over other tile designs on the market.

3 SUPERIOR FIT + FINISH

Crisp rectangular trim looks great — but it can magnify even minor misalignments. Capture Top Caps are designed to attach straight and firmly along the frame and into end covers/ connection posts. Multiple clip positions create a clean, level top alignment along every panel run. Capture starts out looking good and stays that over time.

4 STREAMLINED TOP CAPS + END TRIMS

Other system designs on the market may sacrifice aesthetics for a lower cost. Capture trim components are designed to flow seamlessly for an exceptionally sleek, clean look — at a competitive price. Look and compare: Capture offers a more attractive solution.

5 SIMPLE CONNECTIONS

Simple strong and rigid — Capture offers a uniquely fast and secure panel connection system. Panel frames ship assembled and connect with a quick clip/cam/quarter turn. Capture sets up significantly faster than other panel systems, saving time and installation costs.
